RATED LIFTING CAPACITY CHART

(1) RATED LIFTING CAPACITY CHART WITH USE OF OUTRIGGERS

- 1) Load ratings do not exceed 78 percents of tipping load with the machine set horizontally on a firm and level ground, and include weight of hook block(s) and other load handling accessories.

Ratings in area are based on the machine's structural strength, and others are determined by the machine stability.

Kind of hook	<input type="text"/> 4.9 ton	<input type="text"/> 1.4 ton
Weight	<input type="text"/> 72 kgs (158.7lbs)	<input type="text"/> 25 kgs (55.1lbs)

- 2) Since the operating radius given in the chart includes allowances for laden boom deflection, the machine must be always operated on the basis of actual operating radius.
- 3) The outrigger maximum extended width is 4.4 meters (14.436ft) , and the mid-point extended widths are 3.6 meters (11.811ft) and 2.7 meters (8.858ft) .
- 4) Ratings in Over Side vary according to the outrigger extended condition. Therefore operation must be based on the rating chart corresponding to each outrigger extended condition.
- 5) When the boom length exceeds the specified length shown in the rating chart, operation must be performed basing on the smaller rating of the specified length or the next longer boom length show.
- 6) Ratings with the use of the auxiliary sheave are the same as the ratings with the boom less 70kgs (154.3lbs), but should not exceed 1400kgs (3086.5lbs).
- 7) Free falling operation shall be, as a rule, used when lowering the hook block only. When it is required to free fall a load, the load must not exceed one fifth of the rated load, and sudden brake must be absolutely avoided.

Standard number of reevings of hook block

Boom length	Used hook	Number of parts
5.1m	4.9ton hook	4
8.4m	4.9ton hook	4
11.6m	4.9ton hook	4
16.4m	4.9ton hook	4
21.2m	4.9ton hook	4

(2) RATED CAPACITY CHART WITH USE OF OUTRIGGERS

Operating Radius (m)	Outriggers fully extended (all around)					Outriggers extended to mid-point (3.6m) (over side)					Outriggers extended to mid-point (2.7m) (over side)					Outriggers minimum extended (over side)					Operating Radius (m)
	5.13m boom	8.35m boom	11.56m boom	16.38m boom	21.21m boom	5.13m boom	8.35m boom	11.56m boom	16.38m boom	21.21m boom	5.13m boom	8.35m boom	11.56m boom	16.38m boom	21.21m boom	5.13m boom	8.35m boom	11.56m boom	16.38m boom	21.21m boom

RATED LIFTING CAPACITY CHART

WITHOUT USE OF OUTRIGGERS

- 1) Load ratings are the approved maximum lifting capacity of this machine with the specified air pressure of the tires on a firm and level ground, and include weight of hook block (s) and other load handling accessories.

Kind of hook	4.9 ton	1.4 ton
Weight	72 kgs (158.7lbs)	25 kgs (55.1lbs)

- 2) Since the operating radius given in the chart includes allowances for laden boom deflection, the machine must be always operated on the basis of the actual operating radius.
- 3) Over side lifting can not be done. Do work by the over front only.

Over Front

- 4) Neither of boom operation and free fall operation should be done.
- 5) When performing stationary lifting, be sure to engage the parking brake (and auxiliary brake for work).
- 6) When performing picking and carrying operation, be sure to place the high speed/low speed selector switch in the ON (low range) position.
- 7) When performing picking and carrying a load, hold the load near the ground, and travel within 2km (1.24miles) per hour of speed not to allow the load to be swung. Especially be careful for cornering, sudden start and sudden stop.
- 8) Do not perform any crane operation while traveling with a load suspended.
